

## Open-source browser targets Linux gadgets

Aug. 01, 2007

A software development firm in Montpellier, France recently released a new open-source browser intended for use in consumer device applications. Pleyo's "Origyn Web Browser" (OWB) is based on the open-source WebKit Web browser engine, and targets mobile phones, PMPs, PVRs, GPS gadgets, and more.

(Click here for larger screenshot of OWB on the N800)

In a whitepaper published here at *LinuxDevices*, Pleyo CTO Jean-Charles Verdie introduces OWB, briefly describes its architecture, explains how developers can get involved in the project, and shows off some screenshots, including one of OWB running on the Nokia N800 Internet Tablet.
