

PRESS RELEASE

www.sand-labs.org, an open-source platform dedicated to Consumers Electronic Devices, is born !

Montpellier, July 20th, 2007

www.sand-labs.org is born !

This open-source platform hosts projects based on the Web technology for Consumers Electronic Devices such as mobile phones, portable media players, Set Top Boxes and TV decoders, and any other consumer electronic product (GPS, home-gateways, Web-radios, PVR, DVD recorders, wireless devices etc.)

The first project is OWB (Origyn Web Browser), a web browser for CE Devices based on Webkit. OWB enables access to external web services such as user interface administration and animation, the whole being based on the latest web standards.

Other projects are already in preparation and will appear on www.sand-labs.org in the coming weeks. To submit your projects : projects-proposal@sand-labs.org.

Manufacturers, Operators and Organizations are invited to partner and sponsor the sand-labs initiative. Please contact : board@sand-labs.org.

Many privileges are reserved to members of this initiative, with several access conditions. For further information, please contact us : board@sand-labs.org.

About www.sand-labs.org

Sand-labs.org is an opensource web community for Consumer Electronic devices.
More details on www.sand-labs.org

About Origyn Web Browser

OWB is based on Webkit, the Apple open-source Project (www.webkit.org), which is supported and adopted by major Industrials.
